PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience designing Python-based ETL pipelines, backend microservices, and data automation systems for enterprise telecom and banking platforms. Skilled in building scalable data processing workflows using Pandas and NumPy with a track record of cutting manual effort by up to 90% and operational costs by up to 80%. Seeking to leverage strong software engineering foundations, Agile experience, and security-first development practices to contribute to high-performance, scalable backend solutions in a global, collaborative environment.

TECHNICAL SKILLS

- **Languages & Core:** Python, SQL, Object-Oriented Programming, **Data Structures & Algorithms**
- **Data Engineering:** ETL Pipeline Design, Data Aggregation, Batch Processing, Query Optimization, Real-Time KPI Computation
- **Frameworks & Libraries:** Pandas, NumPy, Matplotlib, Quartz
- **Software Engineering: Design Patterns** (SOLID, MVC) ,Microservices Architecture, REST APIs, Agile/Extreme Programming, SDLC, CI/CD, Multithreading, Debugging & Performance Tuning
- **Databases:** MySQL, Indexing, Query Optimization, Data Warehousing
- **Tools & Platforms:** Git, Linux, Bash/Shell Scripting, JSON, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer I | Bank of America

Oct 2025 – Present

- Build and maintain automated **ETL data pipelines** in Python that ensure timely, accurate data availability for downstream banking systems.
- Own day-to-day operations of **CMDR**, a centralized data repository consolidating data from multiple upstream sources via **NATS** messaging for real-time data ingestion, reducing manual reconciliation effort by **90%** and operational cost by **80%**.
- Demonstrated **Strong Ownership** by ensuring the **Integrity** and **Security** of critical data pipelines. Enforced strict information security policies and collaborated effectively with global, cross-functional teams to maintain **System Reliability** and **High Performance**.

Associate, Tools & Automation – GSC (Network Division) | Samsung India Electronics Ltd.

Mar 2025 – Oct 2025

- Engineered an **ETL Microservice** using Flask and APScheduler within an **Agile Environment**. Collaborated with global teams to automate backend report generation, ensuring modular, testable, and high-quality code delivery.
- Designed and optimized the ETL pipeline to deliver structured **JSON** reports with **30% faster execution**, while ensuring seamless integration with existing services to improve system efficiency and scalability.

Executive, Tools & Automation – GSC (Network Division) | Samsung India Electronics Ltd.

Jun 2022 – Mar 2025

- Built a **Telecom KPI Automation Engine** in Python (Agile/Extreme Programming) to automate data extraction, transformation, and load (ETL) for real-time KPI calculation and report generation, serving both US and Indian telecom clients.
- Used **Pandas** and **Matplotlib** for data analysis and visualization, reducing manual effort by **80%** and operational time by **60%**.
- Developed a scalable data aggregation algorithm integrated across multiple software systems and web applications, improving processing efficiency by **90%**.
- Modernized legacy workflows by migrating them to Python-based data science tooling, improving maintainability and analysis speed.

EDUCATION

Bachelor of Engineering, Information Technology | Vidyalkar Institute of Technology

Aug 2018 – May 2022

CGPA: 8.78 / 10

Higher Secondary Education, Computer Science | N.K. Gokhale Jr. College of Science

Jun 2016 – Jun 2018

Score: 70.46%

SOFT SKILLS

- Problem Solver
- Inter-Communication
- Global Collaboration
- Versatile
- Quick Learner
- Team Player
